"One of the many responses to Professor Mendelsohn's contribution in the journal "Raum&Zeit" No. 90, 91 and 92 from 1998 with the title "Is the Heart Only a Secondary Organ?", was the reference by Dr. med. Hans A. Nieper from Hannover to the publication of a scientific paper from the USA from 1996 with the title "The Heart is not a Pump" in "Frontier Perspectives" Volume 5 (1). Dr. Peter Augustin, biologist, says: "The pressure from the heartbeat is so low that it can never be the cause of blood flow. In this context, one should think particularly of whales and dinosaurs, not of tiny humans." Victor Schauberger: "Through the spiral movement, the blood - just like the water in streams and rivers - receives an axial thrust."

Here you will find articles on why clean, absolutely toxin-free water is best for the body.

It's good.
to be truu.
