Forced treatment for all Britons without water filters through state "drinking water vaccination"?

Admittedly, this headline sounds unusually sensational on a channel like ours. Yet in view of the unscrupulous health threat to millions of children, women and men - as well as all islanders who do not want to accept this unremarkable definition of their gender - it is difficult to remain calm.

Chris Whitty, the Chief Medical Officer for England and his counterparts in Wales, Scotland and Northern Ireland are implementing forced medication of the population with fluoride by contaminating drinking water with this chemical substance. Numerous scientists from around the world, whose voices are suppressed by all means, describe fluoride as "cellular poison".

The justification for the action comes from the same health authority that issues national consent declarations for COVID-19 vaccination and so on. It claims: "Adding more fluoride to drinking water would reduce tooth decay in children from the wealthier population by 17 percent and in those from the poorer population by as much as 28 percent.

The Contergan scandal in Germany was once exposed by the undeniable mutilations of babies, but the victims of the fluoride scandal can simply be allowed to disappear in the stream of "civilization diseases". For 70 years until the present, this scandal has been covered up by promoting supporters of fluoridation in their careers and financially while critical, skeptical scientists are defamed, ruined, dismissed and financially drained. Fluoridation of drinking water is a treatment without consent. People who do not have powerful reverse osmosis filters to supply themselves with pure, clean water are effectively subjected to forced chemical treatment. Thus water fluoridation is a violation of Article 6 of the Universal Declaration on Bioethics and Human Rights of UNESCO. It states among other things: "Every preventive, diagnostic and therapeutic medical intervention shall be carried out with the prior, free and informed consent of the person concerned on the basis of adequate information. The United Kingdom is one of the 193 member countries of this subsidiary organization of the

United Nations.

There are not too many alternatives to protect oneself and one's family from this state-mandated forced medication. One can get involved in organizations like "Fluoride Free Alliance UK", whose website publishes valuable information such as a list of "50 reasons to oppose water fluoridation". One can protest, write letters to politicians, and one should probably do all of this. But whoever wants to be absolutely certain and protect their family from unwanted fluoride intake through drinking water can equip their household with a kind of "firewall for the kitchen" and install a high-quality reverse osmosis filter. This has the advantage that it protects not only against fluoride but simultaneously against several thousand(!) other different contaminants that are found nowadays in tap water, in our advanced world.

Study (Title): "Fluoride is a bio-accumulative, endocrine-disrupting, neurotoxic carcinogen - not a nutrient." Study: "Symptomatic fluorosis is more damaging to hard tissues such as dental and skeletal structures. However, fluoride damage to other organs (heart, brain, liver and kidney) cannot be overlooked." Study: Recent findings show that fluoride intake at concentrations of 1.5 ppm is significantly responsible for *skeletal fluorosis. *(Osteosclerosis, muscle atrophy and neurological disorders)
