Can one take the constant praise of the city of Munich seriously regarding the purity of its tap water, when residues of heavy metals, zinc, cadmium, mercury, various medications and hormones, microplastics, glyphosate, plant protection and insect control agents are not even searched for and no tests are carried out?

Free of viruses and bacteria does not mean, in view of the growing number of environmental toxins from the substances mentioned above, that water is clean or pure.

The video by Prof Spitz and Dr. Burzler lasts 11 minutes and provides insights into this topic. The question of which water is best for humans and through which measures everyone can make this water available to themselves is also answered.

Interesting information about the extraordinary effects of clean, contaminant-free water for humans at: https://t.me/truuinfochannel

It's good.
