Imagine if three or four fully occupied airplanes crashed every day ...

Imagine if three or four fully occupied airplanes with children under five years old crashed every day. Diseases caused by contaminated water - which would be relatively easy to remedy - claim the same number of victims. Additionally, another million people die each year from deficiencies in wastewater disposal. Diarrhea is the best-known disease associated with contaminated food and contaminated water, but there are other health impairments as well. In 2021, according to the WHO, more than ...

Imagine if three or four fully occupied airplanes with children under five years old crashed every day. Diseases caused by contaminated water - which would be relatively easy to remedy

- claim the same number of victims. Additionally, another million people die each year from deficiencies in wastewater disposal. Diarrhea is the best-known disease associated with contaminated food and contaminated water, but there are other health impairments as well. In 2021, according to the WHO, more than 251.4 million people required preventive treatment against schistosomiasis - an acute and chronic disease caused by parasitic worms that are transmitted through contact with contaminated water.
