"Man-made" Aluminum Rain Over Germany

Under the keywords "geoengineering" or "weather manipulation," in connection with the CO2 discussion and the supposedly man-made climate change, there are so many heated discussions that we initially did not want to address the topic ...

Under the keywords "geoengineering" or "weather manipulation," in connection with the CO2 discussion and the supposedly man-made climate change, there are so many heated discussions that we actually did not want to address the topic of aluminum contamination of drinking water through "man-made application of aluminum particles."

However, our last post on the topic of protection from aluminum in drinking water received the greatest response in our channel. At the same time, there is sufficient evidence that aluminum is also being applied in highly health-hazardous amounts in Germany and is burdening our waterways, among other things. Therefore, we have decided to still make our information available on this subject.

Weather modification by human hand is hundreds of years old. Soldiers, scientists, and many others from no fewer than 50 different countries officially work on weather manipulation today. (Source) or also HERE . Dr. med. Dietrich Klinghardt (73) is a German physician and scientist. He is an expert in neurobiology and has lived in the USA for 33 years. Chronically ill patients from around the world come to his hospital. Klinghardt is convinced that the large aluminum residues in his patients do not come from deodorant under the armpits, but from active "aluminum spraying." During his time as a ski doctor in the Black Forest, he personally witnessed and observed the application of aluminum on Feldberg. In 2015, he reported the following in one of his lectures: "We were skiing. The sky was blue until large transport aircraft came and conducted systematic scheduled flights, which left a white cloud behind them. The sky then began to cover itself with a layer of this white haze. The weather changed and the cloud sank down, so that everyone began to cough. Many got headaches, many no longer felt like skiing even though the weather was nice, and many other skiers also left the mountain." After it began to snow, Dr. Klinghardt and his people took samples of the freshly fallen snow and found that the snow contained more aluminum than snow. Dr. Klinghardt and his colleagues conducted soil measurements and found that huge amounts of aluminum were detectable in the soil and grass. The measurements were also repeated in Norway, where cows stand in front of full pastures but do not eat the grass because it has been contaminated with aluminum. Despite full pastures, they would starve if Norwegian farmers

did not import grass.

According to Klinghardt, aluminum causes inflammation and is a breeding ground for many infectious and neurological diseases.

With these two measures you can protect your body from the effects of aluminum contamination: 1) Detoxification: According to the detoxification protocol by Dr. Klinghardt 2) The use of an effective drinking water treatment system in your own home and office, so that harmful substances are not absorbed at all through beverages or food. When using a high-performance water filter system, you also provide your body with the best to support it in its natural detoxification measures. At the same time, you prevent the absorption of several thousand other substances that are typically found in tap water and burden the body.
