As you call into the water, so it echoes out.

There are "established" scientists who dispute all evidence from their colleagues showing that the will of man, his feelings and the power of his thoughts change water. Reflexively, evidence pointing to the possible existence of such a causation is attacked and fought against instead of being researched and optimized. Water is the outstanding medium by which it can be demonstrated and even photographed at any time, in any place in the world, with the most primitive means, that thoughts or consciousness alter matter.

Despite being certain of exposing themselves to attacks on their own reputation, water researchers worldwide cannot be deterred from publishing their observations. Particularly well-known became: Dr. Masaru Emoto, Prof. Dr. Bernd-Helmut Kröplin, Prof. Dr. Gerald H. Pollack, Prof. Dr. Konstantin Korotkov, Victor Schauberger, Prof. Dr. Jacques Benveniste, and others.

Part III

It's good.
to be truu.
