Water is not only a powerful and versatile primordial element; its 70(!) diffe

Water is not only a powerful and versatile primordial element; its 70(!) different anomalies (irregular behavior compared to most other substances) are what first made life on Earth possible. Its unpredictable nature continues to leave scientists baffled and struggling for explanations to this day. The documentary film "Water - The Secret Power of Water" gives the mystery of "water" a real boost. For some, it feels like an abduction into another world - one that is not necessarily real to everyone. Others feel validated in their worldview and "in very good hands." Julia Perkul and Anastaysia Popova produced it in 2006. We present this film to you because it is worth watching in its entirety and reflecting on the many experiments, representations, and explanations. Do not be discouraged by the theses in the first few minutes if they sound somewhat lofty - after all, it is numerous award-winning scientists and biologists who make these statements, including Nobel Prize winners who comment on them later in the film. Fundamental aspects presented in the film have also been taken into account in the construction of our water refinement systems.

Water is not only a powerful and versatile primordial element; its 70(!) different anomalies (irregular behavior compared to most other substances) are what first made life on Earth possible. Its unpredictable nature continues to leave scientists baffled and struggling for explanations to this day. The documentary film "Water - The Secret Power of Water" gives the mystery of "water" a real boost. For some, it feels like an abduction into another world - one that is not necessarily real to everyone. Others feel validated in their worldview and "in very good hands." Julia Perkul and Anastaysia Popova produced it in 2006. We present this film to you because it is worth watching in its entirety and reflecting on the many experiments, representations, and explanations. Do not be discouraged by the theses in the first few minutes if they sound somewhat lofty - after all, it is numerous award-winning scientists and biologists who make these statements, including Nobel Prize winners who comment on them later in the film. Fundamental aspects presented in the film have also been taken into account in the construction of our water refinement systems. Whether you let yourself be entertained or fascinated is up to you. What we can promise you in any case is an entertaining 81 minutes with surprising investigations and theses, aesthetic images and sounds, and a pleasant narrator's voice. https://t.me/truuinfochannel

It's good.
to be truu.
