is a special form of water that can be easily absorbed and efficiently utilized by the cells of the body. It is characterized by the following properties:

It can easily penetrate cell membranes to ensure optimal moisture supply to cells and tissues . It has a hexagonal (six-sided) molecular structure that facilitates entry into the cells . It is particularly pure and free from contaminants such as pharmaceutical residues . It has a low mineral content, since excessive minerals in water can burden the body .

It's good.
to be truu.
